## DiveX-Vision

### The DiveX-Vision is a complete underwater video and divers communication system.

The Surface Control Unit has a 15.3" LCD wide-angle screen with data overlay, split screen viewing and editing features. It allows up to 30 hours recording which is self-contained within the unit and can be downloaded via various ports to other displays, recording mediums, etc. There are dual camera and infinitely variable lamp power supplies, 'rubberised' alpha numeric keyboard and battery back-up for the divers communications (2 divers and tender) all built into a rugged waterproof case.

It comes with a CT3008 inspection Camera which allows for high resolution (540 lines) underwater. Low light sensitive (0.02 lux f1.2) colour cameras are fitted with a 2.6mm auto iris lens with a hand anodized aluminium housing rated to 100 metres water depth.

A CT4003 underwater LED light is used which is optimised for video use and fitted with a frosted light diffuser with a hard anodised aluminium housing related to 1000 metres water depth.

Also included is a 100 metre composite water blocked cable assembly with a tough polyurethane outer jacket and terminated with appropriate tails and connectors at both ends.

Two stainless steel brackets are mounted to the camera and lamp to a diver's helmet. This can be changed for a hand grip bracket if preferred.
