

Logistics Support

DESCRIPTION

JFD Cowan's reputation extends to ongoing maintenance, logistic support, spares and training both within Australia and overseas.

JFD Cowan is the largest provider of hyperbaric maintenance and repair services to Australian Defence supporting a total of 23 recompression chambers. This involves arrangements with the Royal Australian Navy and Australian Defence Industries.

Further, it provides assistance to Intermarine Spa (Italy), Royal Thailand Navy and the Vachira Hospital in Phuket Thailand, Prince of Wales Hospital Hyperbaric Facility.

The objective of the Maintenance & Servicing Program is to ensure that the Recompression Chamber System operates at the peak level of performance specified.

JFD Cowan utilises a monitoring and reporting system that enables the program to be continually reviewed and outcomes communicated to the client.

LOGISTICS SUPPORT

JFD Cowan is experienced in a comprehensive maintenance management and configuration control system.

In overseas destinations JFD Cowan trains and, at regular intervals, accredits local agents to carry out regular inspections and undertake maintenance tasks. JFD Cowan's Australian technicians remain on call and would normally carry out a full audit of the system (on the ground in the relevant country) annually.

JFD Cowan's Australian technicians carry out the first round of the servicing contract. This provides an opportunity for the local technicians to be trained and accredited for their ongoing role. This will ensure that those carrying out the servicing are trained and accredited to a standard equivalent to that achieved by JFD Cowan with its Defence Authority clients.
