The Divex Rigsuit is a hard-wearing and proven drysuit. Manufactured from double lined 7mm neoprene, suit integrity is exceptionally good. All seams are triple glued and stitched inside and out. It comes with built-in neoprene boots, with vulcanised gripped soles. Heavy duty, protective dimpled kneepads offer comfort and stability when kneeling on the 'bottom' and increasing the longevity of the suit.

Designed for shoulder entry, the rigsuit requires assistance when 'dressing-in', as the wearer cannot close the heavy duty waterproof zipper by themselves. The zipper is manufactured from stainless steel and has a quality glide action, designed to resist jamming whilst providing a watertight seal.

A pull-loop is attached to the end of the zipper.

The neckseal is manufactured from single sided neoprene. This has to be cut-to-size, but should never be done by a novice as just a few millimetres inappropriate trimming can make the seal's fit poor leading to water intake and buoyancy problems.

In colder climates a hood is often required to be an integral part of the suit. A 6mm attached hood is available. Just suffix the order code of the required suit with 'H'.

Buoyancy control is provided through the optional fitting of inflation and dump valves. For standard orders the inflation valve is normally mounted centrally on the chest, while the dump valve is usually mounted on the arm, but these can be fitted to customer's requirements. This flexibility allows individual diver or company preferences to be catered for, to suit harness positions etc. An inflation whip is supplied to connect to the inflation valve from the 1st stage regulator. Low magnetic versions of the Divex Rigsuit are available with low magnetic zipper, valves and inflation whip.
