Ultrathermics Circuit Breaker

The Ultrathermics 630 Welding Circuit Breaker is a two pole 630 amp welding circuit breaker that conforms with the requirements of the current North Sea Regulations on the control of underwater cutting and welding operations.

The single switching action by the diving tender breaks both poles of supply thereby rendering the cutting/welding equipment safe.

This robust and highly acclaimed product is now fitted to most diving control systems worldwide.

The totally enclosed design offers full protection to the surface operator from unintentional physical electrical contact whilst also shielding the individual from the visual arc spark during breaking of the circuit.
